HOW KYBELLA® WORKS

The active ingredient in KYBELLA® is synthetic deoxycholic acid. Deoxycholic acid is a naturally occurring molecule in the body that aids in the breakdown and absorption of dietary fat. When injected into the fat beneath the chin, KYBELLA® destroys fat cells, resulting in a noticeable reduction in fullness under the chin. Once destroyed, these cells can no longer store or accumulate fat, so further treatment is not expected once you reach your desired aesthetic goal. Purchase one vial for \$600.00 and receive \$200.00 off your 2nd Treatment. Offer good while supplies last and both syringes must be purchased at the first appointment to receive promotional pricing.
